

New observatory at Cordón Macón

The construction of an astronomical facility at Cordón Macón (4660 m.a.s.l.) in Salta Province, Argentina is the continuation of more than five years of site testing carried on by IATE and ESO at this site. Currently, the project is being supported by the Salta Province Government and the MINCyT. Even though the characteristics of the instrument to be located at Macón are not completely defined yet, the construction of an 8 metres diameter dome is currently under construction. This dome will have the capability of hosting a 1.5 m reflector telescope.
